

Building and Construction Waste Collection & Recycling Services

In recent years the construction and demolition industry has focused on improving waste management. In the Strategy for Sustainable Construction, the industry has committed to reducing waste to landfill by 50%, by 2012.

In addition, pressure on construction companies to improve efficiency is growing. Many organisations have recognised that recycling and recovery solutions can often provide an effective solution to reducing waste management costs.

A. E. Burgess & Sons Ltd are working closely with many major building and construction companies, offering recycling solutions as well as traditional waste management services.

Our expertise in separation, segregation and recycling makes us the first choice for many new construction projects in Leicestershire, it is no accident that we have provided waste collection services for over 80% of Leicestershire's major builds since 1850.

Our Service

Our services are tailored to the requirements of our clients and are at the forefront of new developments and techniques to reduce the industry's impact on the environment.

This is a specialised field but we are able to offer solutions in conjunction with general waste collection and segregation of recyclables on site, where environment permits are required.

**Best Prices Paid
For Scrap Metal**

We provide a full range of waste collection and disposal services including;

- Waste Collection using a range of skips to suit your needs.
